Steel-to-concrete
Update: July 24

HIT-HY 200-A V3 and HIT-HY 200-R V3 injection mortars

Anchor design (EN 1992-4, EOTA TR 082) / Rods, Sleeves and Rebar / Concrete

Injection mortar system	Benefits
 <p>Hilti HIT-HY 200-A V3</p>	<ul style="list-style-type: none"> -  technology: Makes installation steps faster, simpler and safer. Automatic borehole cleaning with hollow drill bits, accurate dosing with HDE and fast and safe torquing with the adaptive torque (AT) system.
 <p>Hilti HIT-HY 200-R V3</p> <p>500 ml foil pack (also available as 330 ml foil pack)</p>	<ul style="list-style-type: none"> - Suitable for uncracked and cracked concrete C20/25 to C50/60
 <p>Anchor rod (M8-M30): HAS, HAS HDG, HAS A4, HAS-U, HAS-U HDG, HAS-U A4, HAS-U HCR</p>	<ul style="list-style-type: none"> - ETA Approved for seismic performance category C1, C2 - Maximum load performance in cracked concrete and uncracked concrete - High corrosion / corrosion resistance
 <p>Internally threaded sleeve (M8-M20): HIS-N HIS-RN</p>	<ul style="list-style-type: none"> - Small edge distance and anchor spacing possible - Manual cleaning for borehole diameter up to 20mm and $h_{ef} \leq 10d$ for uncracked concrete only
 <p>Anchor rod (M8-M20): HIT-Z(-D TP) HIT-Z-F HIT-Z-R(-D TP)</p>	<ul style="list-style-type: none"> - ETA data for 50 and 100 Years Working Life - Suitable for dry and water saturated concrete
 <p>Anchor rod (M12-M20): HAS-D</p>	<ul style="list-style-type: none"> - Data under fire exposure in accordance with TR082 for threaded rod size M8 to M30
 <p>Rebar ($\phi 8 - \phi 32$)</p>	<ul style="list-style-type: none"> - Anchorage is steel fibre-reinforced concrete with HAS-D

All data in this section applies to:

- Correct setting (see setting instruction)
- For a single anchor
- Hammer drilled holes, hammer drilled holes with Hilti hollow drill bit
- No edge distance and spacing influence (see setting detail tables with characteristic distances)
- Minimum base material thickness, as specified in the table of this section
- Embedment depth, as specified in the table of this section
- Anchor material, as specified in the tables of this section (HIS-N with screw grade 8.8 and HIS-RN with screw grade 70)
- Concrete C20/25 with and without steel fibre for HAS-D.
- Concrete C20/25 without steel fibre for all anchor types.
- Data given below are for 50 Years Working Life
- In-service temperature range I
(min. base material temp. -40°C, max. long/short term base material temp.: +24°C/40°C)
- The following data are valid for a $\psi_{sus} = 1,0$
- Recommended loads: With overall partial safety factor for action $\gamma = 1,4$.

Seismic loading based on ETA-19/0601 and ETA-19/0632. Design according to EN 1992-4

All data in this section applies to:

- Correct setting (see setting instruction)
- For a single anchor
- Hammer drilled holes, hammer drilled holes with Hilti hollow drill bit
- No edge distance and spacing influence (see setting detail tables with characteristic distances)
- Minimum base material thickness, as specified in the table of this section
- Embedment depth, as specified in the table of this section
- Anchor material, as specified in the tables of this section
- Concrete C20/25
- Temperature range I (min. base material temp. -40°C, max. long/short term base material temp.: +24°C/40°C)
- $\alpha_{\text{gap}} = 1,0$ (using Hilti seismic filling set) or $\alpha_{\text{gap}} = 0,5$ (without using Hilti seismic filling set) accordingly

Setting information

Installation temperature:

- -10 °C to +40 °C (for HAS, HAS-U, HAS-D, HIS-N)
- +5 °C to +40 °C (for HIT-Z)

In-service temperature range

Hilti HIT-HY 200-A V3 and HIT-HY 200-R V3 injection mortars with anchor rod HAS / HAS-U / HIS-N / Rebar / HIT-Z / HAS-D may be applied in the temperature ranges given below. For the intended temperature range specified in the design, the respective bond strength values shall be taken from the ETA.

Temperature in the base material

Temperature range	Base material temperature	Maximum long term base material temperature	Maximum short term base material temperature
Temperature range I	-40 °C to +40 °C	+24 °C	+40 °C
Temperature range II	-40 °C to +80 °C	+50 °C	+80 °C
Temperature range III	-40 °C to +120 °C	+72 °C	+120 °C

Maximum short term base material temperature

Short-term elevated base material temperatures are those that occur over brief intervals, e.g., as a result of diurnal cycling.

Maximum long term base material temperature

Long-term elevated base material temperatures are roughly constant over significant periods of time.

Minimum edge distance and spacing – Explanation

Minimum edge and spacing geometrical requirements are determined by testing the installation conditions in which two anchors with a given spacing can be set close to an edge without forming a crack in the concrete due to tightening torque.

The HIT-Z boundary conditions for edge and spacing geometry can be found in the tables. If the embedment depth and slab thickness are equal to or greater than the values in the table, then the edge and spacing values may be utilized.

PROFIS Engineering software is programmed to calculate the referenced equations in order to determine the optimized related minimum edge and spacing based on the following variables:

Cracked or uncracked concrete	For cracked concrete it is assumed that a reinforcement is present which limits the crack width to 0,3 mm, allowing smaller values for minimum edge distance and minimum spacing
Anchor diameter	For smaller anchor diameter a smaller installation torque is required, allowing smaller values for minimum edge distance and minimum spacing
Slab thickness and embedment depth	Increasing these values allows smaller values for minimum edge distance and minimum spacing

Setting details for HAS-D

Anchor size			M12	M16	M20	
Nominal diameter of drill bit	d_0	[mm]	14	18	24	
Effective anchorage depth	h_{ef}	[mm]	100	125	170
