In accordance with article 3 (3) of REACH, this / these item(s) are articles.

An article is not subject to the mandatory marking regulations applicable to dangerous substances.

The product is not classified as hazardous to health or environment according to the CLP regulation.

Hazard statements Void

2.3 Other hazards

For the battery chemical materials are stored in a hermetically sealed metal case, designed to withstand temperatures and pressures encountered during normal use. As a result, during normal use there is no physical danger of ignition or explosion and chemical danger of hazardous materials leakage.

It may cause heat generation or electrolyte leakage if battery terminals contact with other metals. Elektrolyte is flammable. In case of electrolyte leakage move the battery from fire immediately.

However if exposed to a fire, added mechanical shocks, decomposed, added electric stress by miss-use, the gas release vent will be operated. The battery case will be broken at the extreme, hazardous materials may be released.

Moreover, if heated strongly by a surrounding fire, acrid gas may be emitted.

Results of PBT and vPvB assessment

PBT: Not applicable.

vPvB: Not applicable.
